

SHARING YOUR EXPERIENCES COULD HELP FAMILIES LIKE YOURS IN THE FUTURE

The Lotus Study is an online study of patients who have been prescribed DAYBUE™. This study aims to learn more about the full spectrum of experience before, during, and after taking DAYBUE.

The study lasts 12 months, with the option to continue for a second year.

Information will be collected through brief online questionnaires only. Questionnaires take less than 30 minutes to finish, and often take less than 5 minutes. After your loved one starts taking DAYBUE, an email with a link to the questionnaires will come:

- weekly for the first 12 weeks
- monthly for the next 3 months
- every 3 months for the rest of the study

People may be able to take part in the study if they:

- are a caregiver of someone who has been prescribed DAYBUE
- are willing and able to answer questions about **the patient's** condition.

If you would like to watch a video overview of the study, visit bit.ly/LotusOverview or scan this QR code.

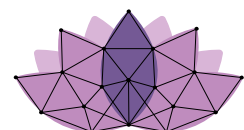

This study has been approved by an Institutional Review Board (IRB)/ Ethics Committee (EC), which protects the rights, safety, and well-being of the participants.

Want to know more?

To learn more about the Lotus Study, please speak to your nurse care coordinator at **Acadia Connect® (1-844-737-2223)** about joining the study information database.

You will be compensated for your time completing study questionnaires.

You will be able to look back at your answers on previous questionnaires as well as save your completed questionnaires to share with your treatment team.
